# 1. INTRODUCTION

## 1.1 Purpose

This manual provides the information necessary to repair, calibration, description and download the features of this model.

## 1.2 Regulatory Information

### A. Security

Toll fraud, the unauthorized use of telecommunications system by an unauthorized part (for example, persons other than your company's employees, agents, subcontractors, or person working on your company's behalf) can result in substantial additional charges for your telecommunications services. System users are responsible for the security of own system. There are may be risks of toll fraud associated with your telecommunications system. System users are responsible for programming and configuring the equipment to prevent unauthorized use. The manufacturer does not warrant that this product is immune from the above case but will prevent unauthorized use of commoncarrier telecommunication service of facilities accessed through or connected to it. The manufacturer will not be responsible for any charges that result from such unauthorized use.

### B. Incidence of Harm

If a telephone company determines that the equipment provided to customer is faulty and possibly causing harm or interruption in service to the telephone network, it should disconnect telephone service until repair can be done. A telephone company may temporarily disconnect service as long as repair is not done.

### C. Changes in Service

A local telephone company may make changes in its communications facilities or procedure. If these changes could reasonably be expected to affect the use of the phones or compatibility with the network, the telephone company is required to give advanced written notice to the user, allowing the user to take appropriate steps to maintain telephone service.

### D. Maintenance Limitations

Maintenance limitations on the phones must be performed only by the manufacturer or its authorized agent. The user may not make any changes and/or repairs except as specifically noted in this manual. Therefore, note that unauthorized alternations or repair may affect the regulatory status of the system and may void any remaining warranty.

# 1. INTRODUCTION

---

## E. Notice of Radiated Emissions

This model complies with rules regarding radiation and radio frequency emission as defined by local regulatory agencies. In accordance with these agencies, you may be required to provide information such as the following to the end user.

## F. Pictures

The pictures in this manual are for illustrative purposes only; your actual hardware may look slightly different.

## G. Interference and Attenuation

A phone may interfere with sensitive laboratory equipment, medical equipment, etc. Interference from unsuppressed engines or electric motors may cause problems.

## H. Electrostatic Sensitive Devices

### ATTENTION

Boards, which contain Electrostatic Sensitive Device (ESD), are indicated by the  sign. Following information is ESD handling:

- Service personnel should ground themselves by using a wrist strap when exchange system boards.
- When repairs are made to a system board, they should spread the floor with anti-static mat which is also grounded.
- Use a suitable, grounded soldering iron.
- Keep sensitive parts in these protective packages until these are used.
- When returning system boards or parts like EEPROM to the factory, use the protective package as described.

## 2. PERFORMANCE

### 2.1 Default Packaging Accessories

Item	Specification	Performance
1. Battery	Li-ion, 1,100mAh 1ea	Charging Voltage : 4.2V Charging Current : 650mA (Charging Time : under 3 hours)
2.Travel Adapter	Output : 4.6V, 800mA	Input : AC 100 ~ 240V

### 2.2 System Specification

Item	Specification
Shape	GSM850/EGSM/1800/1900 and WCDMA Slim Clamshell
Size	92.7 x 49.5 x 20.9 mm
Weight	100 g (with Battery)
Power	3.7V normal, 1100 mAh Li-Polymer
LCD	TFT Main LCD(2°Ø, 262K, 176 x 220), MSTN Sub LCD
Travel Adaptor	Input : AC 100~240V , Output : 4.6V, 800mA

### 2.3 Using Condition (Accessory)

#### 1) Maximum Using Condition (Using Environment)

Item	Specification
Available AC Input Power	AC 100 ~ 240V Max
Available DC Input Power	12V Max
Storage Temperature	-30 ~ +85 °C

##### 3.10.1 General Description

###### A. Features(MSM6280)

- Support for multimode operation - HSDPA, tri-band WCDMA (UMTS), quad GSM/GPRS/EDGE, GPS
- Support for HSDPA downlink up to 7.2Mbps (initial commercial release will support 3.6Mbps
- HSDPA. Later releases will have support for 7.2 Mbps HSDPA)
- Support for WCDMA (UMTS) uplink data rate up to 384 kbps
- High-performance ARM926EJ-S running at up to 225 MHz (later at 270 MHz for 7.2 Mbps HSDPA)
- ARM Jazelle Java hardware acceleration for faster Java-based games and other applets
- QDSP4000 high-performance DSP cores
- Integrated gpsOne position location technology functionality
- Integrated Bluetooth 1.2 baseband processor for wireless connectivity to peripherals
- Qcamera, with 15 fps QVGA viewfinder resolution, and support for 4 MP camera sensors
- Direct interface to digital camera module with video front end (VFE) image processing
- True 3D graphics for advanced wireless gaming
- SecureMSM v2.0 includes support for Open Mobile Alliance (OMA) DRM v2.0, SIM-lock and IMEI integrity. Support for Q-fuse.
- Audio on par with portable music players
- Vocoder support (AMR, FR, EFR, HR)
- Advanced 14 x 14 mm, 0.5 mm pitch, 409-pin lead-free CSP packaging technology
- SD/SDIO hardware support

### 3.11 Subsystem(MSM6280)

#### 3.11.1 ARM Microprocessor Subsystem

The MSM6280 device uses an embedded ARM926EJ-S microprocessor. This microprocessor, through the system software, controls most of the functionality for the MSM, including control of the external peripherals such as the keypad, LCD, SDRAM, and NAND-Flash devices. Through a QUALCOMM proprietary serial bus interface (SBI) the ARM926EJ-S configures and controls the functionality of the RTR6275, RFR6275 and PM6650 devices.

#### 3.11.2 WCDMA R99 features

The MSM6280 device supports release 99 June 2004 of the W-CDMA FDD standard, including the following features:

- All modes and data rates for W-CDMA frequency division duplex (FDD), with the following restrictions:
  - ❑ The downlink supports the following specifications:
    - Up to four physical channels, including the broadcast channel (BCH), if present
    - Up to three dedicated physical channels (DPCHs)
    - Spreading factor (SF) range support from 4 to 256
    - The following transmit diversity modes are supported:
      - Space time transmit diversity (STTD)
      - Time-switched transmit diversity (TSTD)
      - Closed-loop feedback transmit diversity (CLTD)
- The uplink supports the following specifications:
  - ❑ The uplink provides the following UE support:
    - One physical channel, eight TrCH, and 16 TrBks starting at any frame boundary
    - A maximum data rate of 384 kbps
  - ❑ Full SF range support from 4 to 256
- SMS (CS and PS)
- PS data rate - 384 kbps DL / 384 kbps UL
- CS data rate - 64 kbps DL / 64 kbps UL
- AMR (all rates)

#### 3.11.3 GSM features

The following GSM modes and data rates are supported by the MSM6280 device hardware. Support modes conform to release '99 specifications of the sub-feature.

- Voice features
  - ❑ FR
  - ❑ EFR
  - ❑ AMR
  - ❑ HR
  - ❑ A5/1, A5/2, and A5/3 ciphering

- Circuit-switched data features

- ☐ 9.6k
- ☐ 14.4k
- ☐ Fax
- ☐ Transparent and non-transparent modes for CS data and fax
- ☐ No sub-rates are supported.

### 3.11.4 GPRS features

- Packet switched data (GPRS)

- ☐ DTM (Simple Class A) operation
- ☐ Multi-slot class 12 data services
- ☐ CS schemes: CS1, CS2, CS3, and CS4
- ☐ GEA1, GEA2, and GEA3 ciphering

- Maximum of four Rx timeslots per frame

### 3.11.5 EDGE features

- EDGE E2 power class for 8 PSK
- DTM (simple Class A), multi-slot class 12
- Downlink coding schemes - CS 1-4, MCS 1-9
- Uplink coding schemes - CS 1-4, MCS 1-9
- BEP reporting
- SRB loopback and test mode B
- 8-bit, 11-bit RACH
- PBCCH support
- 1 phase/2 phase access procedures
- Link adaptation and IR
- NACC, extended UL TBF.

### 3.11.6 MSM6280 device audio processing features

- Integrated wideband stereo CODEC
  - ☐ 16-bit DAC with typical 88 dB dynamic range
  - ☐ Supports sampling rates up to 48 kHz on the speaker path and 16 kHz on the microphone path
- VR- Voice mail + voice memo
- Acoustic echo cancellation
- Audio AGC
- Audio Codecs: AMR-NB, AAC, AAC Plus, Enhanced AAC Plus, Windows Audio v9, Real Audio 8 (G2)
- Internal vocoder supporting AMR, FR, EFR, and HR

## 3. TECHNICAL BRIEF

---

### 3.11.7 MSM6280 microprocessor subsystem

- Industry standard ARM926EJ-S embedded microprocessor subsystem
  - ❑ 16 kB instruction and 16 kB data cache
  - ❑ Instruction set compatible with ARM7TDMI®
  - ❑ ARM version 5TEJ instructions
  - ❑ Higher performance 5 stage pipeline, Harvard cached architecture
  - ❑ Higher internal CPU clock rate with on-chip cache
- Java hardware acceleration
- Enhanced memory support

Please note that NOR/PSRAM will not be supported on MSM6280.

  - ❑ 75 MHz and 90 MHz bus clock for SDRAM
  - ❑ 32-bit SDRAM
  - ❑ Dual memory buses separating the high-speed memory subsystem (EBI1) from low-speed peripherals (EBI2) such as LCD panels
  - ❑ 1.8 V or 2.6 V memory interface support (excluding EBI1)
  - ❑ NAND FLASH memory interface
    - 8/16-bit data I/O width NAND flash support
    - 1- or 4-bit ECC
    - 512-byte/2KB page-size support
    - 2 chip selects supported for NAND Flash
  - ❑ Boot from NAND
  - ❑ Low-power SDRAM (LP-SDRAM) interface
- Internal watchdog and sleep timers

### 3.11.8 Supported interface features

- USB On-the-Go core supports both slave and host functionality
- Three universal asynchronous receiver transmitter (UART) serial ports
- USIM controller (via UART)
- Integrated 4-bit secure digital (SD) controller for SD and Mini SD cards
- Parallel LCD interface
- General-purpose I/O pins
- External keypad interface

### 3.11.9 Supported multimedia features

- Provide additional general purpose MIPS by using:
  - ❑ Two QDSP4000s
  - ❑ Dedicated hardware accelerators and compression engines
- Improve Java, BREW, and game performance
  - ❑ Integrated Java and 2D/3D graphics accelerator with Sprite engine
- Enable various accessories via USB host connectivity.
  - ❑ Integrated USB host controller functionality
- Enable compelling visual and audio applications.

#### **Qcamera™**

- High-quality digital camera processing, supporting CCD or CMOS image sensors up to 4-megapixel with 15 fps capture rate
- 15 fps QVGA viewfinder

#### **Qtv™**

- Audio and video decoder that supports VOD, MOD and Broadcast multimedia services.
- Audio Codecs supported: AMR-NB, AAC, AAC Plus, Enhanced AAC Plus, Windows® Audio v9, RealAudio® v8
- Integrated stereo wideband Codec for music/digital clips
- CMX
- Video Codecs supported: MPEG-4, H.263, H.264, Windows Media® v9 and RealNetworks® v10

#### **Video telephony services: Qvideophone™**

- A two-way mobile video conferencing solution that delivers 15 fps @ QCIF
- Video Codecs supported: MPEG-4 and H.263
- Audio Codecs supported: AMR-NB.

#### **Qcamcorder™**

- Real time mobile video encoder
- Video Codecs supported: MPEG-4, H.263, H.264
- Audio Codecs supported: AMR-NB, AAC
- Recording performance: 15 fps @ QVGA, 384 kbps

#### **gpsOne™**

- Integrated gpsOne processing
- Standalone gpsOne mode in which the handset acts as a GPS receiver

#### **CMX™ (MIDI and still image, animation, text, LED/vibrate support)**

- 72 simultaneous polyphonic tones
- 44 kHz sampling rate
- 512 kB wave table
- Support of universal file formats
  - Standard MIDI Format (SMF)
  - SP-MIDI
  - SMAF Audio playback (MA-2, MA-3, MA-5)
  - XMF/OLS
  - MFi (requires Docomo license)

**Table 1-1 Summary of MSM6280 device features**

### 3.11.10 Serial Bus Interface(SBI)

The MSM6280 device's SSBI is designed specifically to be a quick, low pin count control protocol for QUALCOMM's RTR6275, RFR6275 and PM6650 ASICs. Using the SSBI, the RTR6275, RFR6275, and PM6650 devices can be configured for different operating modes and for minimum power consumption, extending battery life in Standby mode. The SSBI also controls DC baseband offset errors.

### 3.11.11 Wideband CODEC

The MSM6280 device integrates a wideband voice/audio CODEC into the mobile station modem (MSM). The CODEC supports two differential microphone inputs, one differential earphone output, one single-ended earphone output, and a differential analog auxiliary interface.

The CODEC integrates the microphone and earphone amplifiers into the MSM6280 device, reducing the external component count to just a few passive components.

The microphone (Tx) audio path consists of a two-stage amplifier with the gain of the second stage set internally. The Rx/Tx paths are designed to meet the ITU-G.712 requirements for digital transmission systems.

### 3.11.12 Vocoder Subsystem

The MSM6280 device's QDSP4000 supports AMR,FR,EFR and HR. In addition, the QDSP4000 has modules to support the following audio functions: DTMF tone generation, DTMF tone detection, Tx/Rx volume controls, Tx/Rx automatic gain control (AGC), Rx Automatic Volume Control (AVC), EarSeal Echo Canceller (ESEC), Acoustic Echo Canceller (AEC), Noise Suppression (NS), and programmable, 13-tap, Type-I, FIR, Tx/Rx compensation filters. The MSM6280 device's integrated ARM9TDMI processor downloads the firmware into the QDSP4000 and configures QDSP4000 to support the desired functionality.

### 3.11.13 ARM Microprocessor subsystem

The MSM6280 device uses an embedded ARM926EJ-S microprocessor. This microprocessor, through the system software, controls most of the functionality for the MSM device, including control of the external peripherals such as the keypad, LCD, RAM, ROM, and EEPROM devices. Through a generic single serial bus interface (SSBI) the ARM926EJ-S configures and controls the functionality of the RFR6275, RTR6275, and PM6650 devices.

### 3.11.14 Mode Select and JTAG Interfaces

The mode pins to the MSM6280 device determine the overall operating mode of the ASIC. The options under the control of the mode inputs are Native mode, which is the normal subscriber unit operation, ETM mode, which enables the built-in trace mode, and test mode for factory testing. The MSM6280 device meets the intent of the ANSI/IEEE 1149.1A-1993 feature list. The JTAG interface can be used to test digital interconnects between devices within the mobile station during manufacture.

## 3. TECHNICAL BRIEF

---

### 3.11.15 General-Purpose Input/Output Interface

The MSM6280 device has general-purpose bidirectional input/output pins. Some of the GPIO pins have alternate functions supported on them. The alternate functions include USB interface, additional RAM, ROM, general-purpose chip selects, parallel LCD interface, and a UART interface. The function of these pins is documented in the various software releases.

### 3.11.16 UART

The MSM6280 device employs three UARTs. UART1 has dedicated pins while UART2 and UART3 share multiplexed pins.

- UART1 for data
- UART2 (can be used for USIM interface)
- UART3 for data

### 3.11.17 USB

The MSM6280 device integrates a universal serial bus (USB) controller that supports both unidirectional and bidirectional transceiver interfaces. The USB controller acts as a USB peripheral communicating with the USB host.

### 3.12 Power Block

#### 3.12.1 General

MSM6280, included RF, is fully covered by PM6650(Qualcomm PMIC). PM6650 cover the power of MSM6280, MSM memory, RF block, Bluetooth, Micro SD, USIM and TCXO.

Major power components are :

PM6650(U401) : Phone power supply

AAT3152IWP(U501) : LCD Backlight charge pump

#### 3.12.2 PM6650

The PM6650 device (Figure 1-1) integrates all wireless handset power management. The power management portion accepts power from all the most common sources - battery, external charger, adapter, coin cell back-up - and generates all the regulated voltages needed to power the appropriate handset electronics. It monitors and controls the power sources, detecting which sources are applied, verifying that they are within acceptable operational limits, and coordinates battery and coin cell recharging while maintaining the handset electronics supply voltages. Eight programmable output voltages are generated using low dropout voltage regulators, all derived from a common trimmed voltage reference.

A dedicated controller manages the TCXO warm-up and signal buffering, and key parameters (under-voltage lockout and crystal oscillator signal presence) are monitored to protect against detrimental conditions.

MSM device controls and statuses the PM6650 IC using Single Serial Bus Interface (SSBI) supplemented by an Interrupt Manager for time-critical information. Another dedicated IC Interface circuit monitors multiple trigger events and controls the power-on sequence.

### 3. TECHNICAL BRIEF

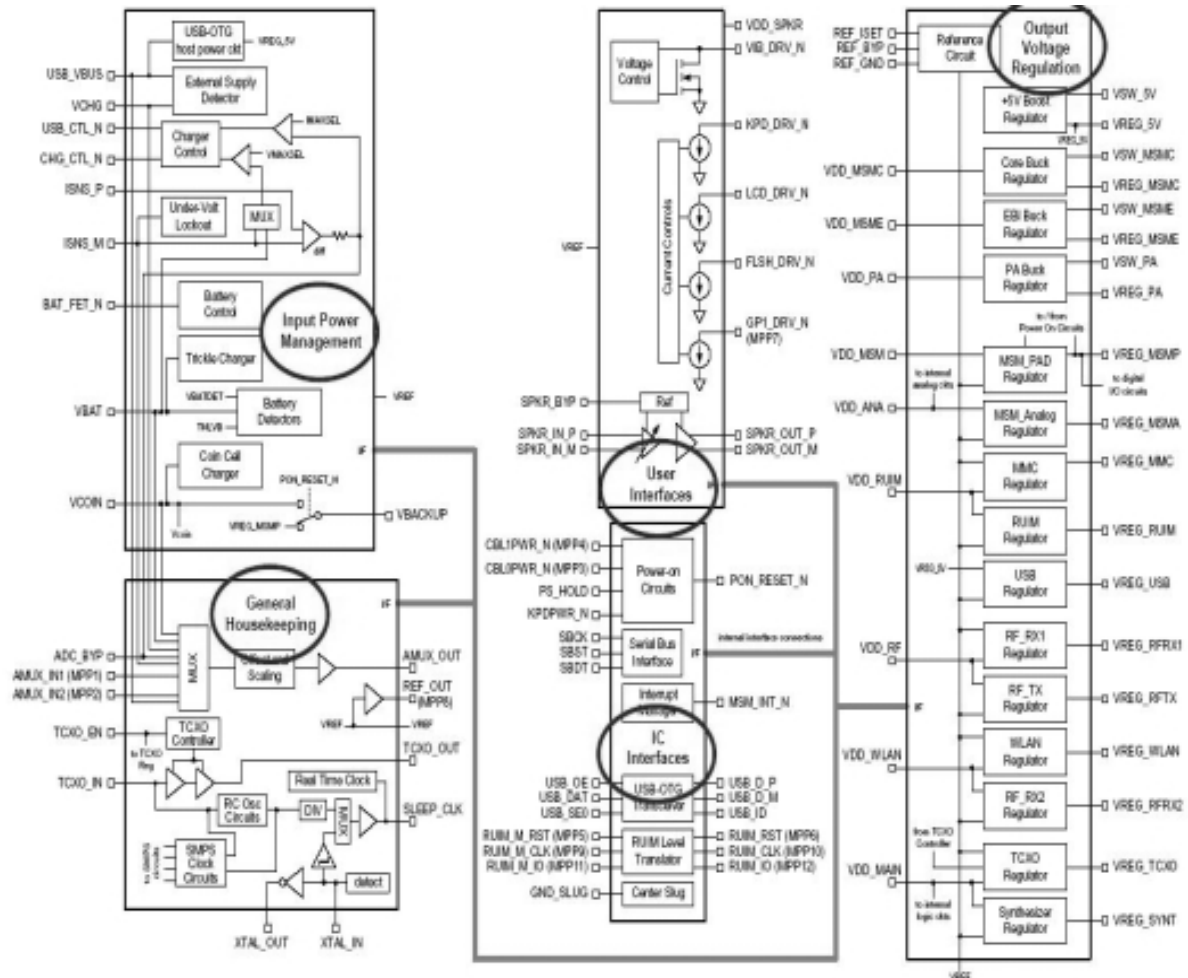

Figure. PM6650 Functional Block Diagram

A programmable charging block in PM6650 is used for battery charging. It is possible to set limits for the charging current. The external supply typically connects directly to pin (VCHG). The voltage on this pin (VCHG) is monitored by detection circuitry to ascertain whether a valid external supply is applied or not. For additional accuracy or to capture variations over time, this voltage is routed internally to the housekeeping ADC via the analog multiplexer. PM6650 circuits monitor voltages at VCHARGER and ICHARGE pins to determine which supply should be used and when to switch between the two supplies. These pins are connected to the Source (or emitter) and Drain (or collector) contacts of the pass transistor respectively.

### 3. TECHNICAL BRIEF

#### Trickle Charging

Trickle Charging of the main battery, enabled through SBI control and powered from  $V_{DD}$ , is provided by the PM6650 IC. The trickle charger is on-chip programmable current source that supplies current from  $V_{DD}$  to pin (VBAT). Trickle charging can be used for lithium-ion and nickel-based batteries, with its performance specified below (3.2V). The charging current is set to 80mA.

Parameter	Min	Typ	Max	Unit
Trickle Current	60	80	100	mA

#### **Constant Current Charging**

The PM6650 IC supports constant current charging of the main battery by controlling the charger pass transistor and the battery transistor. The constant current charging continues until the battery reaches its target voltage, 4.2V.

#### **Constant Voltage Charging**

Constant voltage charging begins when the battery voltage reaches a target voltage, 4.2V.

The end of constant voltage charging is commonly detected 10% of the full charging current (110mA)

- Charging Method : CC & CV (Constant Current & Constant Voltage)
- Maximum Charging Voltage : 4.2V
- Maximum Charging Current : 650mA
- Nominal Battery Capacity : 1100 mAh
- Charger Voltage : 4.6V
- Charging time : Max 3h (Except time trickle charging)
- Full charge indication current (icon stop current) : 110mA
- Low battery POP UP : Idle - 3.42V, Dedicated(GSM/WCDMA) - 3.52V
- Low battery alarm interval : Idle - 3 min, Dedicated - 1min
- Cut-off voltage : 3.28V

### 3.13 External memory interface

#### A. MSM6280

The MSM6280 device was designed to provide two distinct memory interfaces. EBI1 was targeted for supporting high speed synchronous memory devices. EBI2 was targeted towards supporting slower asynchronous devices such as LCD, NAND flash, SRAM, etc.

- EBI1 Features
  - 16 bit static and dynamic memory interface
  - 32 bit dynamic memory interface
  - 24 bits of address for static memory devices which can support up to 32MBytes on each chip select
  - Synchronous burst memories supported (burst NOR, burst PSRAM)
  - Synchronous DRAM memories supported
  - Byte addressable memory supporting 8 bit, 16 bit and 32 bit accesses
  - Pseudo SRAM (PSRAM) memory support
- EBI2 Features
  - Support for asynchronous FLASH and SRAM(16bit & 8bit).
  - Interface support for byte addressable 16bit devices(UB\_N & LB\_N signals).
  - 2Mbytes of memory per chip select.
  - Support for 8 bit/16bit wide NAND flash.
  - Support for parallel LCD interfaces, port mapped or memory mapped(18 or 16 bit)
- 512Mb NAND(8bit) flash memory + 512Mb SDRAM (32bit)
- 1-CS(Chip Select) are used

### 3. TECHNICAL BRIEF

#### 3.14.2.3. USB

The MSM6280 device contains a Universal Serial Bus (USB) interface to provide an efficient interconnect between the mobile phone and a personal computer (PC). The USB interface of the MSM6280 was designed to comply with the definition of a peripheral as specified in USB Specification, Revision 1.1. Therefore, by definition, the USB interface is also compliant as a peripheral with the USB Specification, Revision 2.0. The USB Specification Revision 1.1 defines two speeds of operation, namely low-speed (1.5 Mbps) and full-speed (12 Mbps), both of which are supported by the MSM6280.

## 3.14.9.1 Audio Signal Processing & Interface

Audio signal processing is divided uplink path and downlink path. The uplink path amplifies the audio signal from MIC and converts this analog signal to digital signal and then transmits it to DBB Chip (MSM6280).

This transmitted signal is reformed to fit in GSM & WCDMA frame format and delivered to RF Chipset. The downlink path amplifies the signal from DBB chip (MSM6280) and outputs it to receiver (or speaker). The receive path can be directed to either one of two earphone amplifiers or the auxiliary output. The outputs earphone1 (EAR1OP, EAR1ON) and auxiliary out (AUXOP, AUXON) are differential outputs. Earphone2 (EAR2/EAR3) is a single-ended output stage designed to drive a headset speaker.

The microphone interface consists of two differential microphone inputs, one differential auxiliary input and a two-stage audio amplifier.

## 5. DOWNLOAD

### 5.1 Introduction

LGMDP is a LGE application that allow users to download images from PC to handset. LGMDP is a download tool with capabilities to upload image files to the handset. LGMDP is designed to be simple to use and easy enough for the beginner to upload executable images to the handset. LGMDP supports Windows 2000/XP where the LG (Ver 4.6 or later) USB modem driver is installed. Additionally, LGMDP allows multi downloading up to 8 handsets at the same time.

### 5.2 Downloading Procedure

#### 1) Setup Preferences

Connect the phone to your desktop PC using the USB cable and run the LGMDP application. Before getting started, set up LGMDP preferences from the Preferences of the file menu the way you want. Click on the File menu and select Preferences.

##### > Play a success sound

This is an experimental feature. To enable this simply check the box. It will be played a .wav file when the download has been completed.

##### > Automatically run "Select Port" When LGMDP starts

This option is designed to give user convenient. When LGMDP starts, it will automatically select "Select Port" button to download new image file.

##### > Always on Top

Check if LGMDP always appears at the top of the window so that user can monitor it all the time.

##### > Windows Size

If you want to change program window size, change this option.

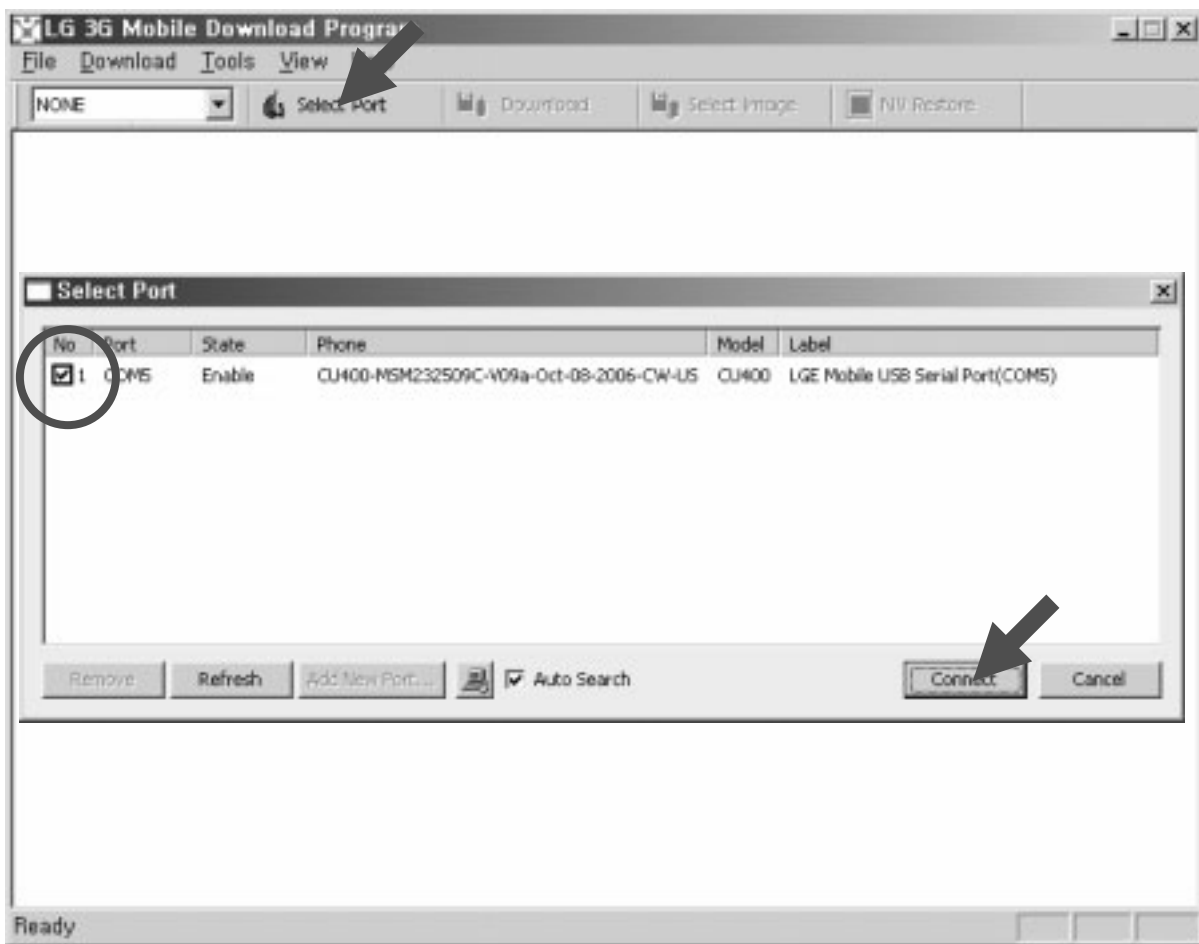

## 5. DOWNLOAD

---

### 1) Connecting to PC

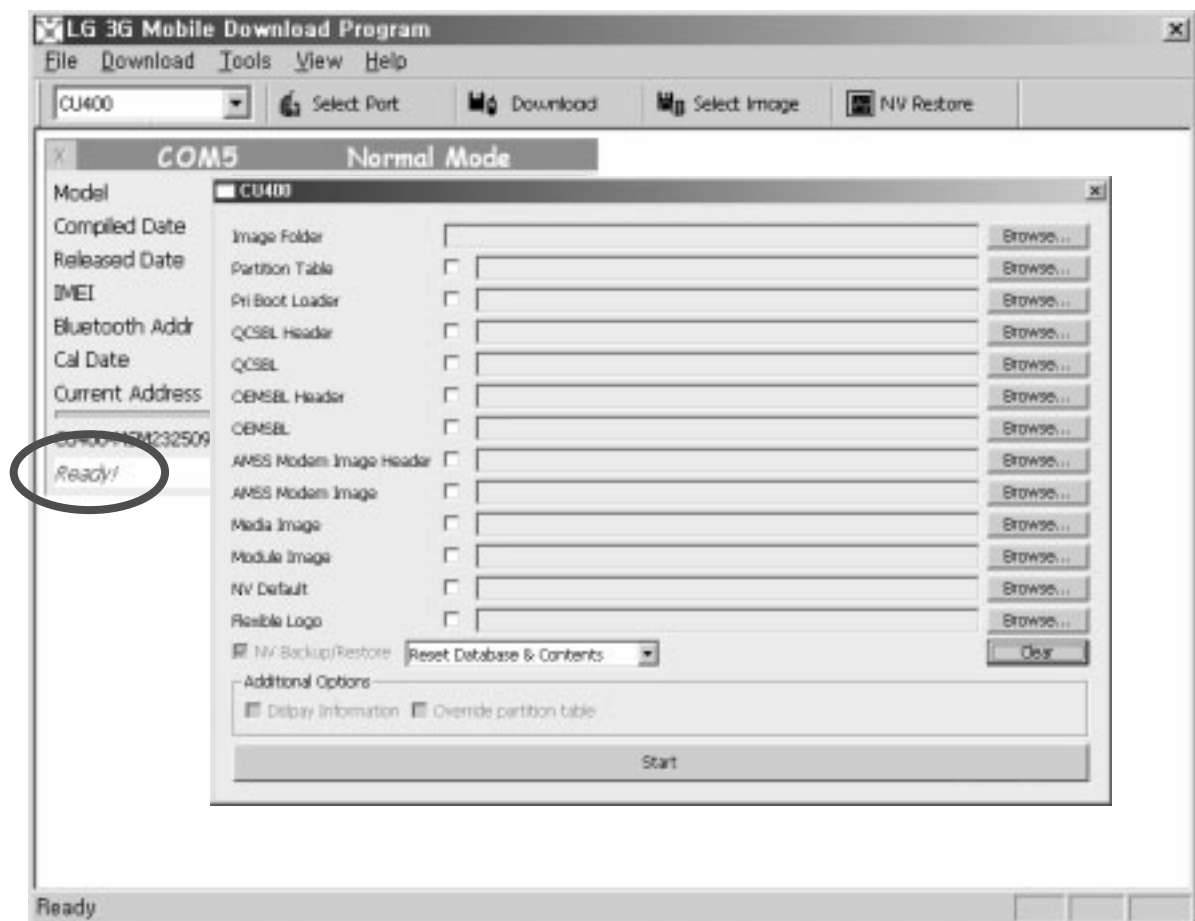

Click on the Select Port and then Select Port window will be pop up. Check if state shows Enable for the port to be connected for downloading images. Then click on the Connect button.

(The port number(COM7) and model name shall be different from that of the port number in the snapshot.)

## 5. DOWNLOAD

The status Ready is displayed when the application is ready for downloading. While the images are transmitted from PC to the handset, a progressive bar (Red box) indicating the degree of transmission of data is displayed.

## 5. DOWNLOAD

The following slide describes how to use or set options in detail.

8) Start

- 1) Image Folder indicates loot path where all image files are placed. To change location of the default image path, select Browse... button. The edit box shows the file path where new images are located. Please note that all images should be located in a selected folder.  
( This program support the automatically loading image for some models based on MSM6275 or MSM6280)
- 2) Click on the Browse... button to select image files to be downloaded on the handset.
- 3) NV Backup/Restore: NV Backup/Restore always have to be done, and it is default selected option. Backup the NV data and restore the backed up NV data automatically.
- 4) Reset database & Contents: User related data including the setting data on the EFS is reset in the handset. The contents in the handset will be erased.  
**Erase\_EFS:** The calibration data, user contents, media, and module are erased. Only calibration data is kept when NV backup/restore is checked.  
**Keep All Contents:** Maintain user data including WAP, AD, DRM, Email, Play lists, images When downloading a new images, user data stated above are maintained if this option is enable.
- 5) Additional Options:  
Display Information is defaultly not selected and user cannot choose.  
**Security:** The security option is automatically selected based on the selected country when security box is selected.
  - Integrity is selected when the selected country is UK, Italy, Hong Kong, Austria, or Israel.
  - Ciphering is not applied or used for H3G user.
  - Fake Security is not applied or used for H3G user.
  - Integrity + Ciphering is selected when the selected country is Australia, Sweden, or Denmark.Please note that user cannot select the options stated above on the security
- 6) Clear: Clearing all directory paths of images in the dialog.
- 7) Override Partition Table : If memory map was changed, you must select this option.  
(Defaultly selected option)
- 8) Start : Starting downloading the selected individual image.

### 2) Choosing image files

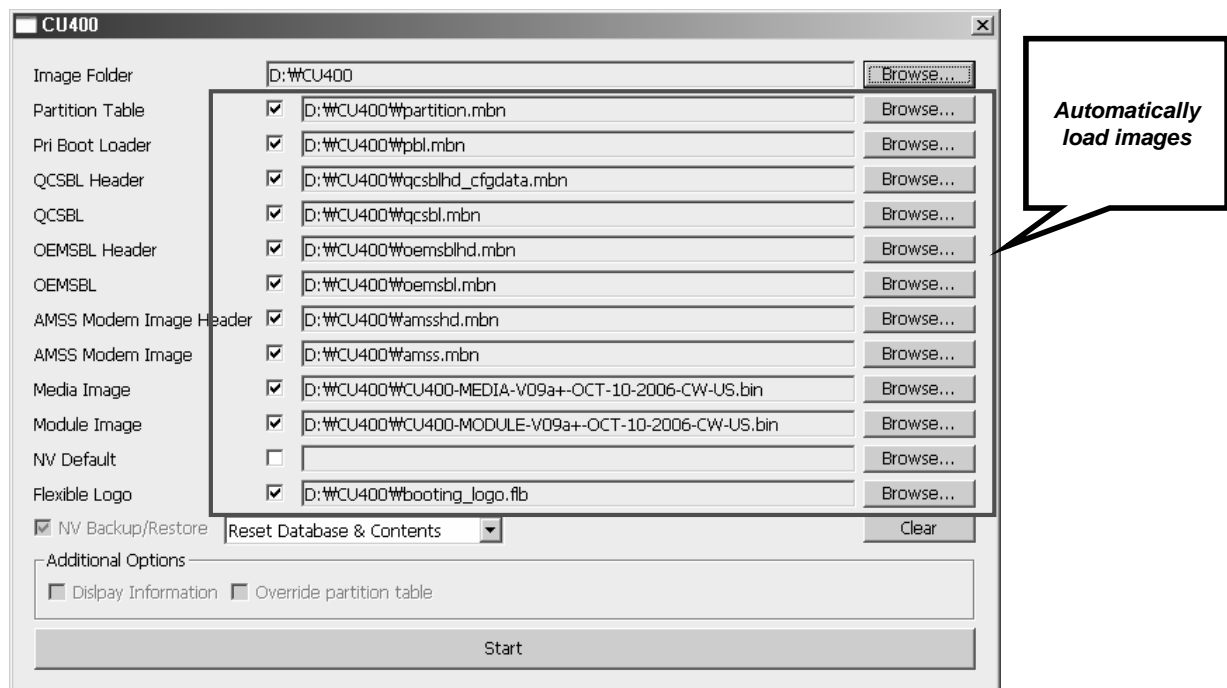

Select the image folder, where all the image files are located, by clicking on the Browse... button. (The folder name shall be different from that of the folder name in the snapshot. The folder name indicates the path where the image files are located.)

★ if you select the image folder, the program will automatically load images accordingly.

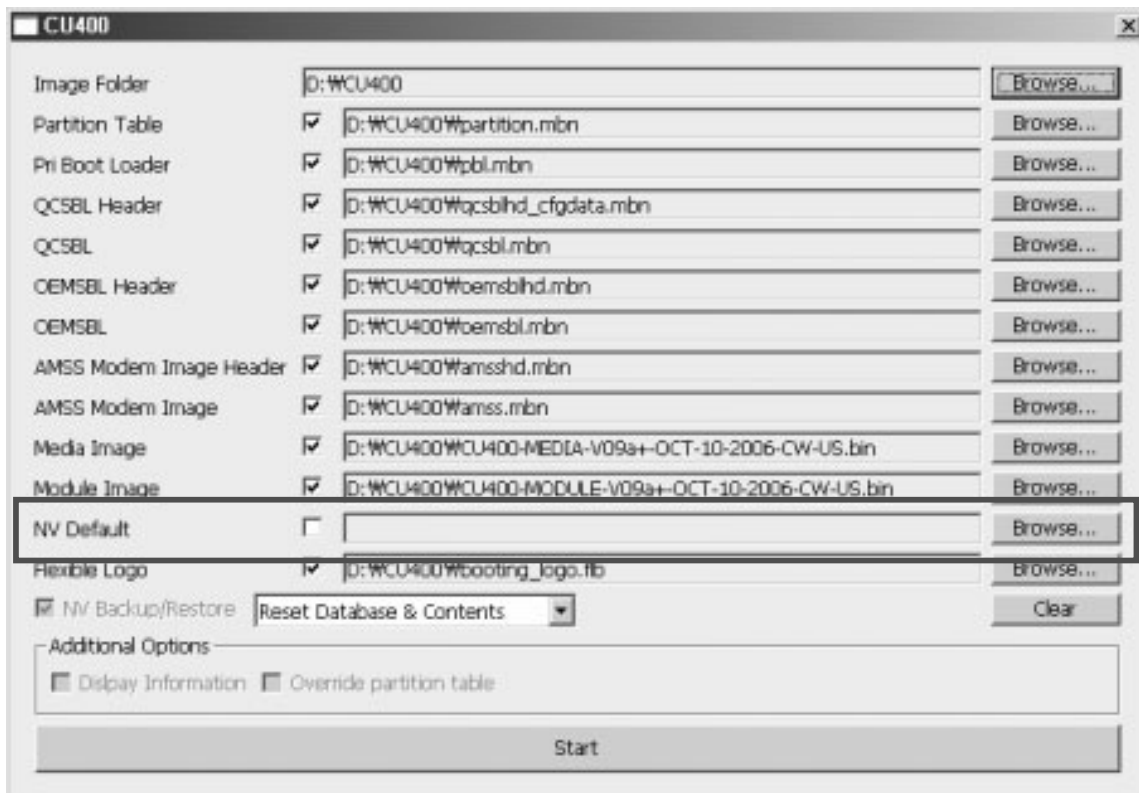

## 5. DOWNLOAD

★ if you select the image folder, the program will automatically load images accordingly.

## 5. DOWNLOAD

If NV restore is failed, then the NV Data(\*.nv2) is erased permantly. In this case, choose the desired NV file to be downloaded on the handset. To enable this simply check the box or select the NV file from the LGMDP installation directory by clicking on the Browse... button.

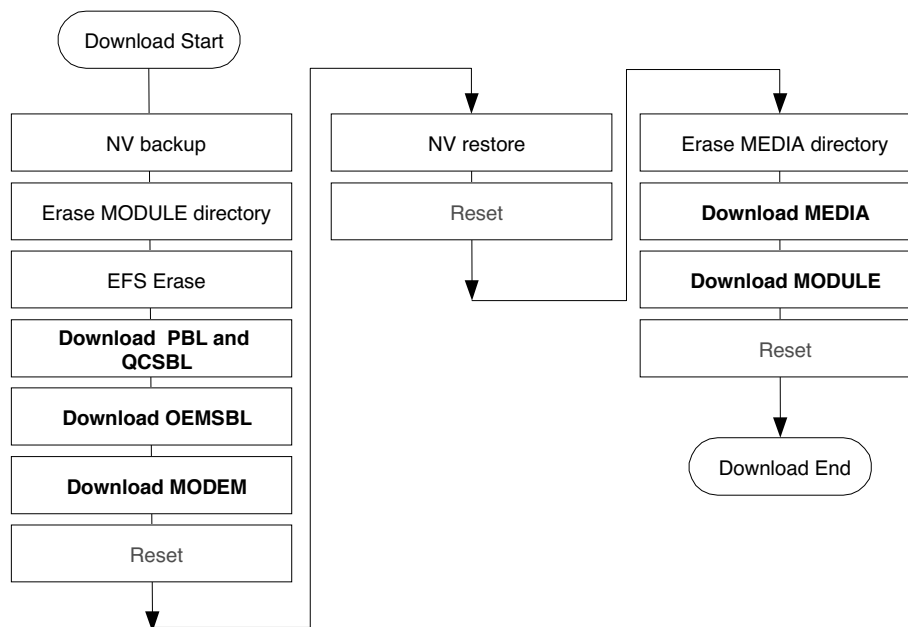

Click on the START button to start downloading.

Normally LGMDP will download all files that need downloading. To download selected image file only simply select the image file that user want to process downloading.

### 3) Downloading

The following flow chart is whole process for downloading images to the handset. You will see snapshots for each step in the succeeding slides.

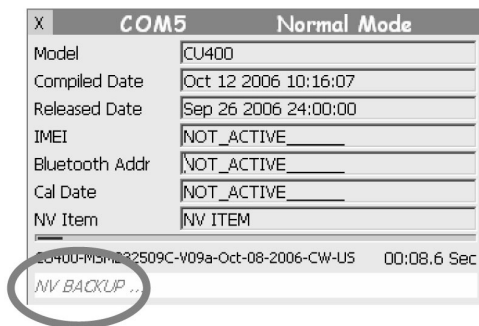

<Download process>

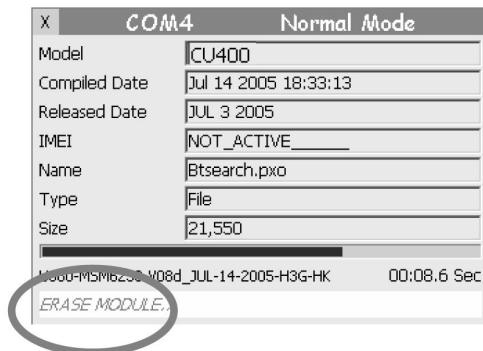

## 5. DOWNLOAD

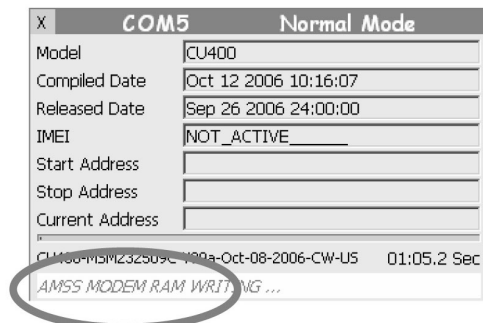

- This message box informs that a new file for NV backup will be created in the displayed file name in the LGMDP installation directory.

- Backing up NV data and backed up NV data will be stored in the LGMDP installation directory.

- Erasing the existing directories and files before the Module image is downloaded.

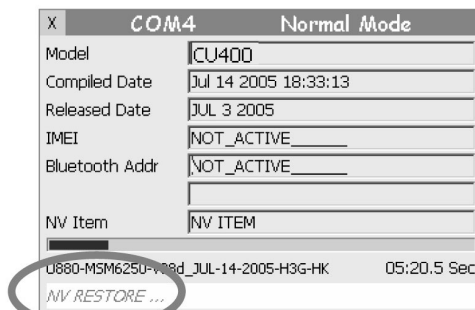

- Downloading the AMSS modem image

## 5. DOWNLOAD

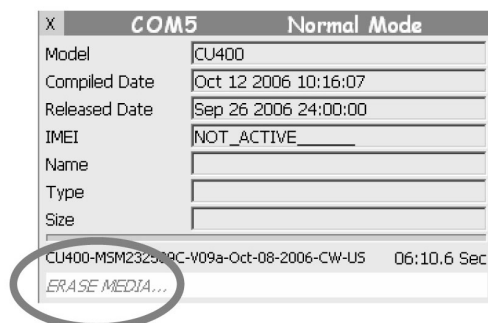

- Rebooting the handset and re-establishing the connection

- Restoring NV data which backed up in the Backing up process. User can also restore NV data using NV Default image selection.

- Rebooting the handset and re-establishing the connection

- Erasing the existing directories and files before downloading the selected Media image

Log Extractor is designed to extract log information from handset and store log related files in the selected root path in PC. This function is very useful for debugging. Select Log Extractor from the Tools of the file menu, and connect the phone with LGMDP by clicking on the Connect button. When clicking on the Connect button, this checks if the appropriate files such as LFAPP/RecMngr.bin, err directory, Debugging\_Tip.txt, or Hidden\_info.bin are placed on the handset. If they are exist, then appropriate check boxes are checked accordingly. Select directory to store log files by clicking on the ... button.

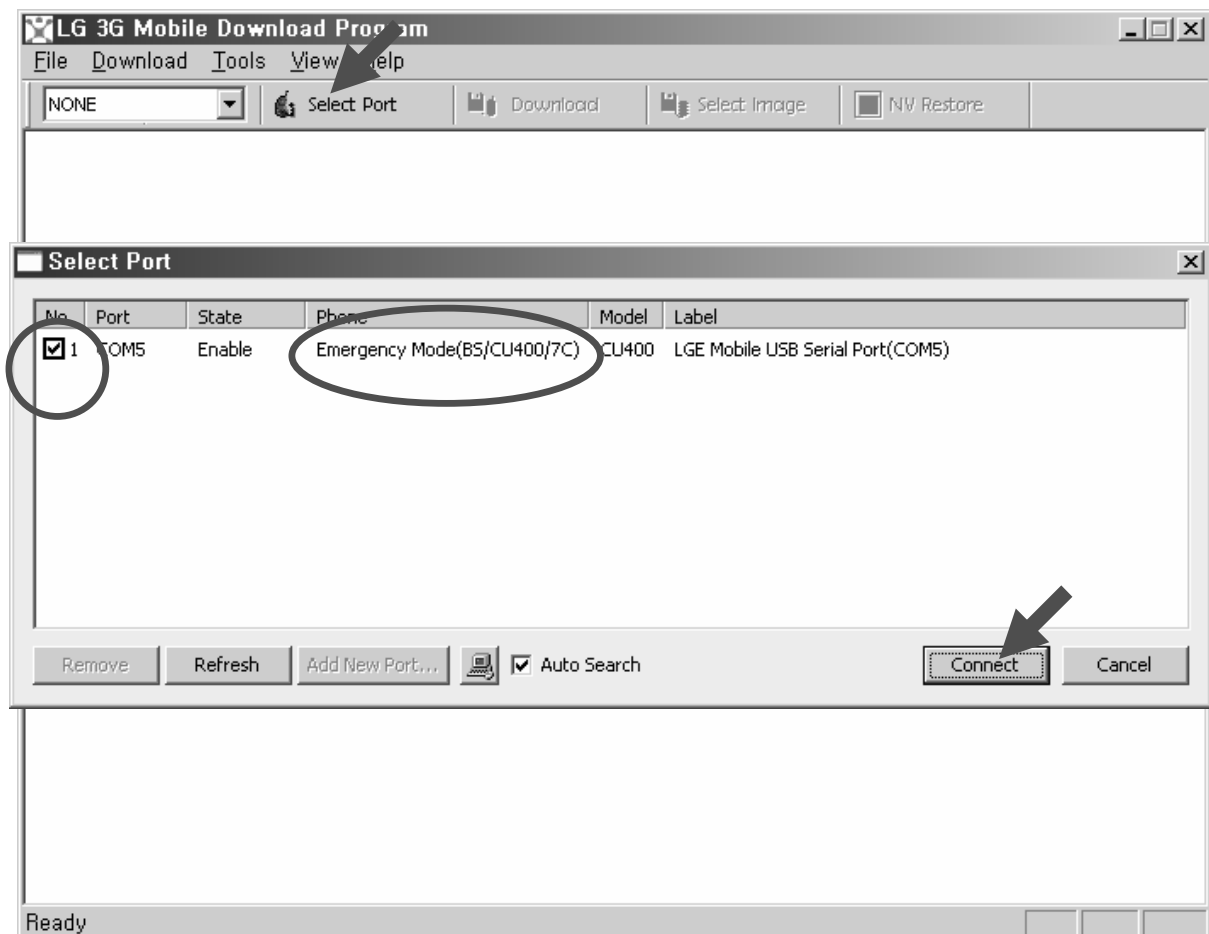

### 5.3 Troubleshooting download errors

#### 1) When the phone does not work

→ Reboot the phone as the emergency mode (keep pressing “2” and “5” key while the phone is being booted). and then try to download the images again.

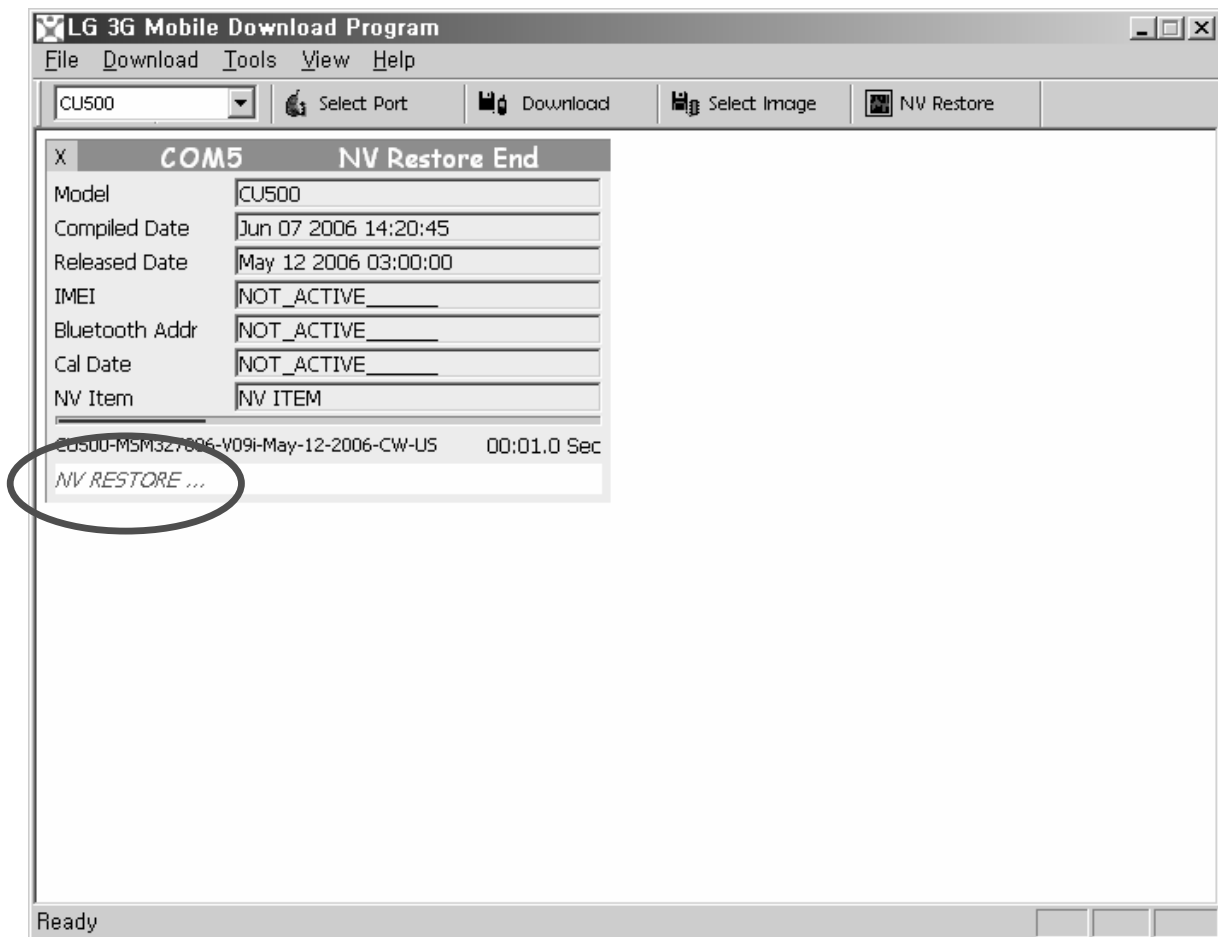

★ The phone supports a special mode named emergency mode. In this mode, minimum units for downloading is running so that users can download the images again in case of emergency situation. (AMSS Modem, Media and Module Images don't be running in this mode.)

## 5. DOWNLOAD

### 2) NV Restore error

When you meet the “NV Restore error”,

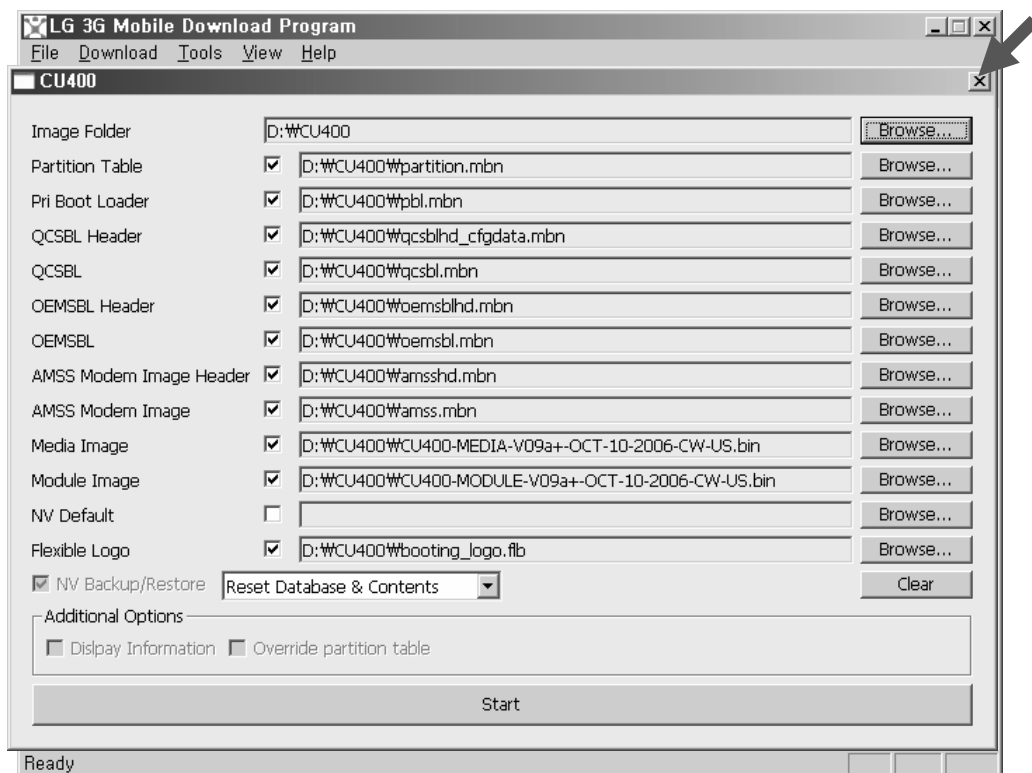

## 5. DOWNLOAD

→ Connect to the phone.

→ Click on 'Cancel'.

## 5. DOWNLOAD

---

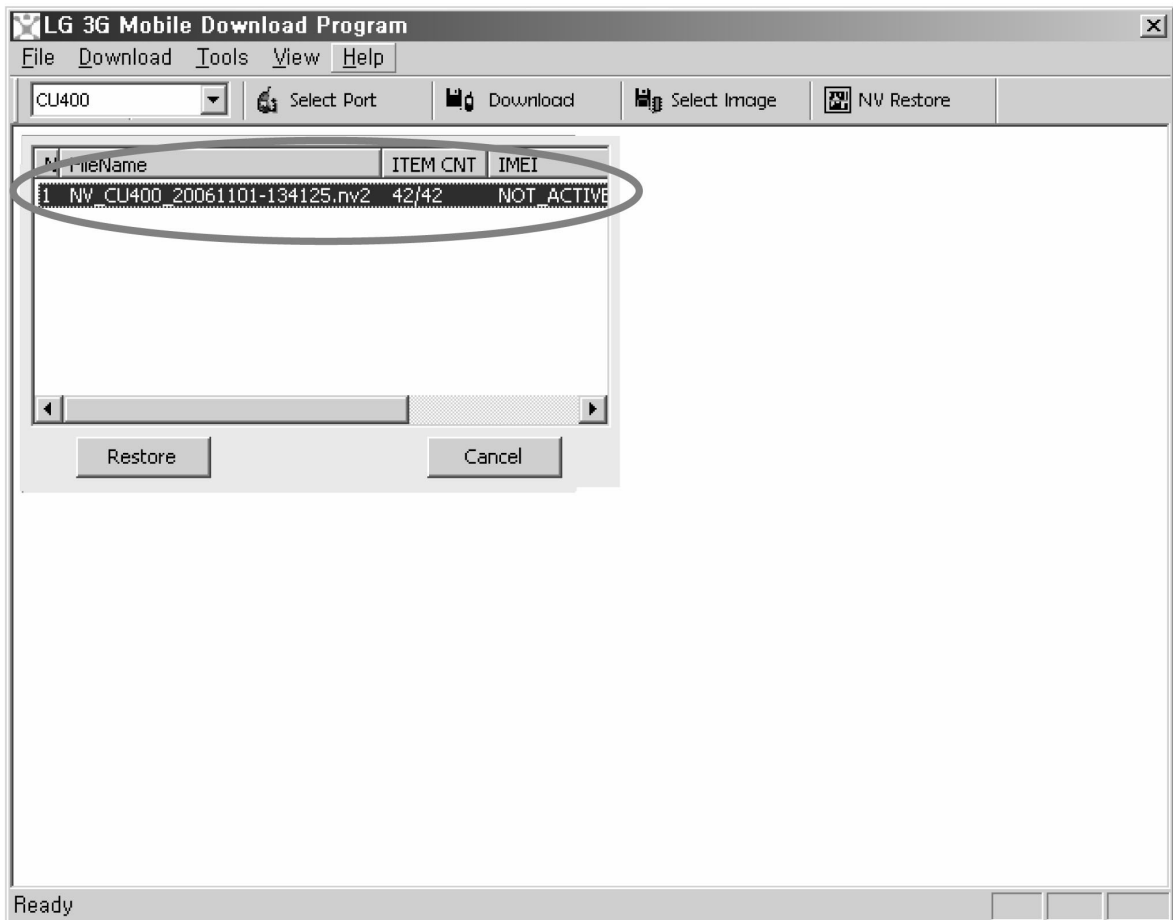

→ Click on 'NV Restore' then several NV Backup files(\*.nv2) are shown.

★ The files are saved every NV Backup. The name is based on the time when NV Backup is done.)

## 5. DOWNLOAD

→ Select the proper file and click on 'Restore'.

## 5. DOWNLOAD

→ If you want image download and NV backup file restore at once, use the NV Default function.

### 5.4 Caution

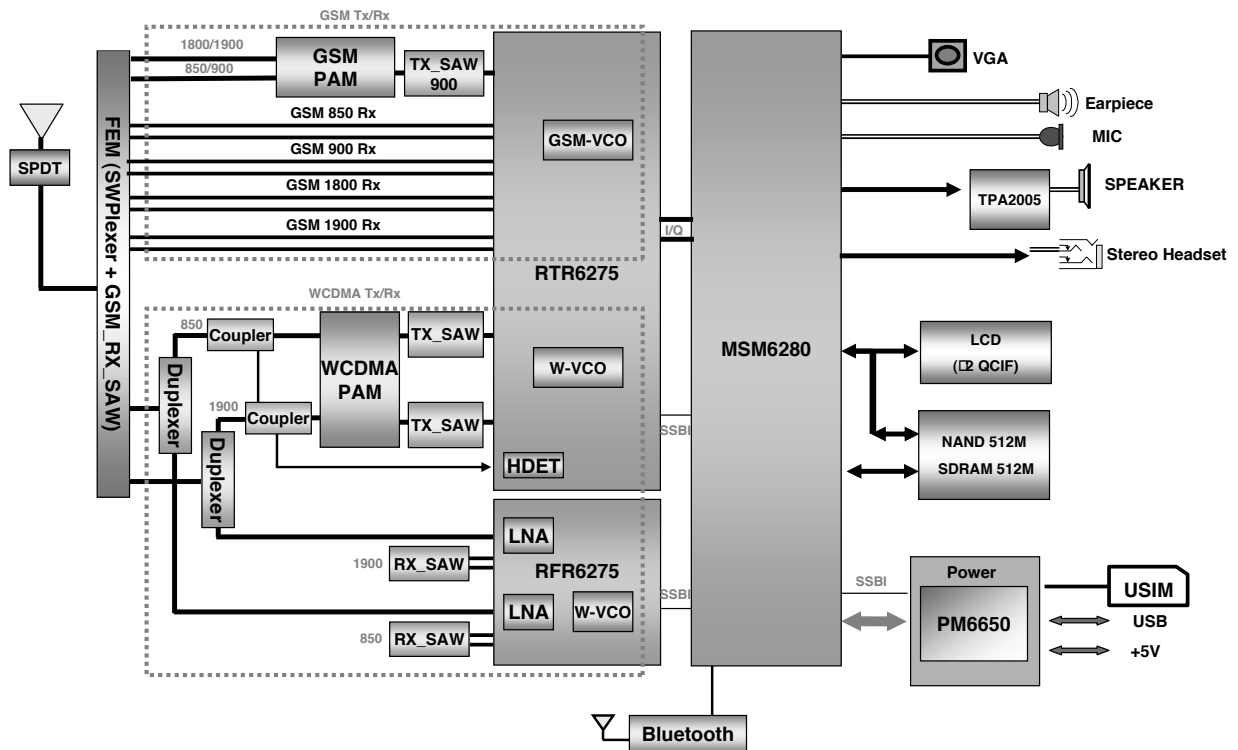

- 1) Multi-downloading using the USB hub is not recommendable.
- 2) If you see the message 'cal mode' after 'completing download', you must do NV restore and image (media and module) download.
- 3) In emergency mode, you can not download the media and module image. So if you want download media and module image, connect the phone normal mode after emergency mode download, and then you can do it.
- 4) The NV data saved at LGMDP folder like this.

- 5) Recommended that the Module and Media Image have to be downloaded at the same time.
- 6) Erase EFS option will erase everything (media, module, nv items, and user data) in the EFS area.

← 'on' or 'off'. (use only lower case)

← 'auto' or 'cal'. (use only lower case)

1: Indication of 'cal process'

2: Model name which is displayed on Hot Kimchi program

3: Relative path of Main Sequence dll file from Hot\_KimchiD.exe

4: You can change this as 'on' or 'off'(should be in lower case; on, off)

5: You can change this as 'auto' or 'cal'(should be in lower case; on, off)

6: Relative path of auto model procedure, spec, setting file from Hot\_KimchiD.exe

### 9.1.3 Items of setup file

[ezlooks] => The yes or no for using ezlooks

Domestic: on, Overseas: off

[batcal] => The yes or no for using battery calibration

[svc] => The yes or no for using HOT KIMCHI at service center

Domestic: off, Service Center: on

[standalone] => Overseas factory or Service Center: on, Domestic: off

[tescom] => The yes or no for using TESCOM shield box

[process] => selection of the process (auto or cal)

[CU400] => procedure, spec., setup file name (only for auto)
